# CLEAN DESK
on-demand

Managing desk sharing
During the COVID-19 pandemic

LoRaWAN®

Order desk cleaning when leaving

Occupancy sensor for the new normal

Many flexible offices use occupancy sensors to optimize desk usage. However, during the COVID-19 pandemic, desk occupancy will take on another meaning altogether. Recent initiatives require companies to be able to record and maintain the cleanliness of particular working areas.

Sensative Strips Presence sensor – with a manual trigger

Normal desk occupancy sensors only report occupied or not occupied, just two values to show the availability ofthe desk.

Sensative Strips Presence has a unique functionality that gives itthe ability to have a manual interaction stage with the device using our one of a kind +Switch.

The Strips Presence has a new reporting type "pending cleaning" which means when a person is at a desk, then leaves, the sensor will report the desk is "pending" cleaning, not just "empty".

This action that is required for the desk to be available for someone else, can, for instance, be pending cleaning and disinfection. When the cleaner has disinfected the desk, they can simply slide the +Switch on the sensor and the sensor will now report that the desk is available and disinfected.
