

## CDx4HC405x, CDx4HCT405x High-Speed CMOS Logic Analog Multiplexers and Demultiplexers

### 1 Features

- Wide Analog Input Voltage Range:  $\pm 5$ -V Maximum
- Low ON-Resistance
  - 70- $\Omega$  Typical ( $V_{CC} - V_{EE} = 4.5$  V)
  - 40- $\Omega$  Typical ( $V_{CC} - V_{EE} = 9$  V)
- Low Crosstalk Between Switches
- Fast Switching and Propagation Speeds
- Break-Before-Make Switching
- Wide Operating Temperature Range:  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- CD54HC and CD74HC Types
  - Operation Control Voltage: 2 V to 6 V
  - Switch Voltage: 0 V to 10 V
- CD54HCT and CD74HCT Types
  - Operation Control Voltage: 4.5 V to 5.5 V
  - Switch Voltage: 0 V to 10 V
  - Direct LSTTL Input Logic Compatibility  
 $V_{IL} = 0.8$ -V Max,  $V_{IH} = 2$ -V Min
  - CMOS Input Compatibility  
 $I_I \leq 1$   $\mu\text{A}$  at  $V_{OL}$ ,  $V_{OH}$
- On Products Compliant to MIL-PRF-38535, All Parameters Are Tested Unless Otherwise Noted. On All Other Products, Production Processing Does Not Necessarily Include Testing of All Parameters.

### 2 Applications

- Digital Radio
- Signal Gating
- Factory Automation
- Televisions
- Appliances
- Programmable Logic Circuits
- Sensors

### 3 Description

The CDx4HC405x and CDx4HCT405x devices are digitally controlled analog switches that use silicon gate CMOS technology to achieve operating speeds similar to LSTTL with the low-power consumption of standard CMOS integrated circuits.

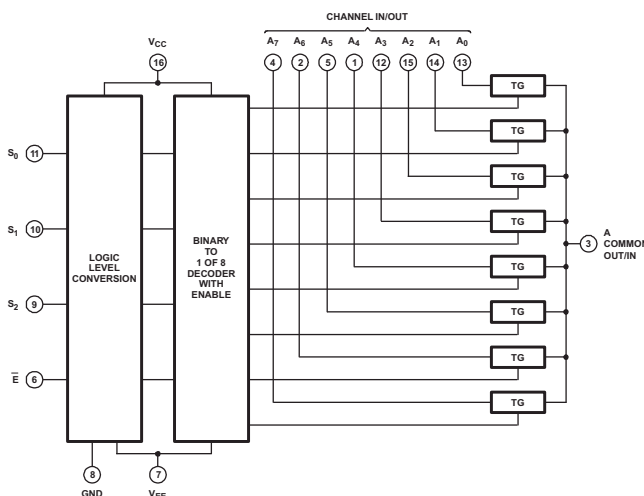

These analog multiplexers and demultiplexers control analog voltages that may vary across the voltage supply range (for example,  $V_{CC}$  to  $V_{EE}$ ). They are bidirectional switches that allow any analog input to be used as an output and vice versa. The switches have low ON resistance and low OFF leakages. In addition, all these devices have an enable control that, when high, disables all switches to their OFF state.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
CD54HCx405xF	CDIP (16)	19.56 mm x 6.92 mm
CD74HCx405xE	PDIP (16)	19.30 mm x 6.35 mm
CD74HCx405xM	SOIC (16)	9.90 mm x 3.91 mm
CD74HCx405xNS	SOP (16)	10.30 mm x 5.30 mm
CD74HCx405xPW	TSSOP (16)	5.00 mm x 4.40 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

#### Functional Diagram of HC4051 and HCT4051

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision L (February 2017) to Revision M	Page
• Changed <i>Feature</i> From: 7-Ω Typical To: 70-Ω Typical .....	1

Changes from Revision K (September 2015) to Revision L	Page
• Changed Charged device model (CDM) value from: $\pm 1000\text{ V}$ to: $\pm 200\text{ V}$ .....	6
• Added <i>Receiving Notification of Documentation Updates</i> section .....	26

Changes from Revision J (February 2011) to Revision K	Page
• Removed <i>Ordering Information</i> table. ....	1
• Added <i>Device Information</i> table, <i>Pin Functions</i> table, <i>ESD Ratings</i> table, <i>Thermal Information</i> table, <i>Detailed Description</i> section, <i>Applications and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	1
• Added Military Disclaimer to <i>Features</i> list. ....	1

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC} - V_{EE}$	DC supply voltage	-0.5	10.5	V
$V_{CC}$	DC supply voltage	-0.5	7	V
$V_{EE}$	DC supply voltage	0.5	-7	V
$I_{IK}$	DC input diode current	$V_I < -0.5\text{ V}$ or $V_I > V_{CC} + 0.5\text{ V}$		±20 mA
$I_{OK}$	DC switch diode current	$V_I < V_{EE} - 0.5\text{ V}$ or $V_I > V_{CC} + 0.5\text{ V}$		±20 mA
	DC switch current <sup>(2)</sup>	$V_I > V_{EE} - 0.5\text{ V}$ or $V_I < V_{CC} + 0.5\text{ V}$		±25 mA
$I_{CC}$	DC $V_{CC}$ or ground current		±50	mA
$I_{EE}$	DC $V_{EE}$ current		-20	mA
$T_{JMAX}$	Maximum junction temperature		150	°C
$T_{LMAX}$	Maximum lead temperature	Soldering 10 s		300 °C
$T_J$	Junction temperature		150	°C
$T_{stg}$	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages referenced to GND unless otherwise specified.

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±500
		Charged device model (CDM), per JEDEC specification JESD22-C101 or ANSI/ESDA/JEDEC JS-002 <sup>(2)</sup>	±200

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

			MIN	NOM	MAX	UNIT
$V_{CC}$	Supply voltage range ( $T_A$ = full package temperature range) <sup>(2)</sup>	CD54 and 74HC types	2		6	V
		CD54 and 74HCT types	4.5		5.5	
$V_{CC} - V_{EE}$	Supply voltage range ( $T_A$ = full package temperature range)	CD54 and 74HC types, CD54 and 74HCT types (see <a href="#">Figure 1</a> )	2		10	V
$V_{EE}$	Supply voltage range ( $T_A$ = full package temperature range) <sup>(3)</sup>	CD54 and 74HC types, CD54 and 74HCT types (see <a href="#">Figure 2</a> )	0		-6	V
$V_I$	DC input control voltage		GND		$V_{CC}$	V
$V_{IS}$	Analog switch I/O voltage		$V_{EE}$		$V_{CC}$	V
$T_A$	Operating temperature		-55		125	°C
$t_r, t_f$	Input rise and fall times	2 V	0		1000	ns
		4.5 V	0		500	
		6 V	0		400	

- (1) For maximum reliability, nominal operating conditions must be selected so that operation is always within the ranges specified in the *Recommended Operating Conditions* table.
- (2) All voltages referenced to GND unless otherwise specified.
- (3) In certain applications, the external load resistor current may include both  $V_{CC}$  and signal line components. To avoid drawing  $V_{CC}$  current when switch current flows into the transmission gate inputs, the voltage drop across the bidirectional switch must not exceed 0.6 V (calculated from  $r_{ON}$  values shown in [Electrical Characteristics: HC Devices](#) and [Electrical Characteristics: HCT Devices](#) tables). No  $V_{CC}$  current will flow through  $R_L$  if the switch current flows into terminal 3 on the HC and HCT4051; terminals 3 and 13 on the HC and HCT4052; terminals 4, 14, and 15 on the HC and HCT4053.

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		CD74HC4051			UNIT
		N (PDIP)	NS (SO)	PW (TSSOP)	
		16 PINS	16 PINS	16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	49.0	83.0	107.7	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	36.3	41.2	42.4	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	29.0	43.3	52.8	°C/W
$\psi_{JT}$	Junction-to-top characterization parameter	21.2	9.2	4.2	°C/W
$\psi_{JB}$	Junction-to-board characterization parameter	28.9	43.0	52.2	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 8 Detailed Description

### 8.1 Overview

The CDx4HCx4051 devices are a single 8-channel multiplexer having three binary control inputs,  $S_0$ ,  $S_1$ , and  $S_2$  and an  $\overline{\text{ENABLE}}$  input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

The CDx4HCx4052 devices are a differential 4-channel multiplexer having two binary control inputs,  $S_0$  and  $S_1$ , and an  $\overline{\text{ENABLE}}$  input. The two binary input signals select 1 of 4 pairs of channels to be turned on and connect the analog inputs to the outputs.

The CDx4HCx4053 devices are a triple 2-channel multiplexer having three separate digital control inputs,  $S_0$ ,  $S_1$ , and  $S_2$  and an  $\overline{\text{ENABLE}}$  input. Each control input selects one of a pair of channels that are connected in a single-pole, double-throw configuration.

When these devices are used as demultiplexers, the CHANNEL IN/OUT terminals are the outputs and the COMMON OUT/IN terminals are the inputs.

### 8.2 Functional Block Diagrams

All inputs are protected by standard CMOS protection network.

## Functional Block Diagrams (continued)

All inputs are protected by standard CMOS protection network.

Figure 18. CDx4HCx4052 Functional Block Diagram

All inputs are protected by standard CMOS protection network.

Figure 19. CDx4HCx4053 Functional Block Diagram

### 8.3 Feature Description

The CDx4HCx405x line of multiplexers and demultiplexers can accept a wide range of analog signal levels from –5 to +5 V. They have low ON resistance, typically 70-Ω for  $V_{CC} - V_{EE} = 4.5$  V and 40-Ω for  $V_C - V_{EE} = 4.5$  V, which allows for very little signal loss through the switch.

Binary address decoding on chip makes channel selection easy. When channels are changed, a break-before-make system eliminates channel overlap.

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The CDx4HCx405x line of multiplexers and demultiplexers can be used for a wide variety of applications.

### 9.2 Typical Application

One application of the CD74HC4051 device is used in conjunction with a microcontroller to poll a keypad. [Figure 20](#) shows the basic schematic for such a polling system. The microcontroller uses the channel-select pins to cycle through the different channels while reading the input to see if a user is pressing any of the keys. This is a very robust setup that allows for simultaneous key presses with very little power consumption. It also uses very few pins on the microcontroller. The down side of polling is that the microcontroller must frequently scan the keys for a press.

**Figure 20. CD74HC4051 Being Used to Help Read Button Presses on a Keypad**

#### 9.2.1 Design Requirements

These devices use CMOS technology and have balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions must be considered to prevent ringing.

## Typical Application (continued)

See Table 4 for the input loading details.

Table 4. HCT Input Loading Table

TYPE	INPUT	UNIT LOADS <sup>(1)</sup>
4051, 4053	All	0.5
4052	All	0.4

(1) Unit load is  $\Delta I_{CC}$  limit specified in [Specifications](#), for example, 360-mA MAX at 25°C.

### 9.2.2 Detailed Design Procedure

- Recommended input conditions:
  - For switch time specifications, see propagation delay times in [Electrical Characteristics: HC Devices](#).
  - Inputs must not be pushed more than 0.5 V above  $V_{DD}$  or below  $V_{EE}$ .
  - For input voltage level specifications for control inputs, see  $V_{IH}$  and  $V_{IL}$  in [Electrical Characteristics: HC Devices](#).
- Recommended output conditions:
  - Outputs must not be pulled above  $V_{DD}$  or below  $V_{EE}$ .
- Input and output current consideration:
  - The CDx4HCx405x series of parts do not have internal current-drive circuitry, and thus cannot sink or source current. Any current will be passed through the device.

### 9.2.3 Application Curve

Figure 21. Typical ON Resistance vs Input Signal Voltage

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Electrical Characteristics: HC Devices](#).

Each  $V_{CC}$  terminal must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu$ F bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a 0.01- $\mu$ F or 0.022- $\mu$ F capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual-supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a 0.1- $\mu$ F bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. A 0.1- $\mu$ F and a 1- $\mu$ F capacitor are commonly used in parallel. For best results, the bypass capacitor or capacitors must be installed as close as possible to the power terminal.

## 11 Layout

### 11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change in width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This change in width upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace, thus resulting in the reflection. Not all PCB traces can be straight, so they will have to turn corners. Figure 22 shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

### 11.2 Layout Example

Figure 22. Trace Example

### 12.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 12.4 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.5 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

### 12.6 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## 12.7 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## PACKAGING INFORMATION

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

NS0016A

# PACKAGE OUTLINE

SOP - 2.00 mm max height

SOP

4220735/A 12/2021

## NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

# EXAMPLE BOARD LAYOUT

NS0016A

SOP - 2.00 mm max height

SOP

4220735/A 12/2021

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.

6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

**SOLDER PASTE EXAMPLE**  
 BASED ON 0.125 mm THICK STENCIL  
 SCALE:7X

4220735/A 12/2021

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

## D (R-PDSO-G16)

## PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  -  C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
  -  D. Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
  - E. Reference JEDEC MS-012 variation AC.

D (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

4220204/A 02/2017

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153.
